Here is some normal text with inline code: `2+3=5` pickles

Here is a margin code block with code-generated text and a plot.  
The text stays in the main body.

I can combine text and code in a footnote<sup>1</sup>, but I get footnote numbering, which I don't want.

How about a list:

- first
- second
- third

<sup>1</sup> `2+3=5`

Here is a margin figure with inline code that does work: `2+3=5`

This is a margin note. If I try to include inline code in it, I get an error because it "failed to tidy R code in chunk"
